1. The data used for the extrapolation of the second quarterly estimates are also used to interpolate the revised annual estimates to quarters in the preparation of the revised quarterly estimates.

2. The quarterly estimates of wages and salaries, other labor income, and proprietors' income are prepared at the sector level of the North American Industrial Classification System and the annual estimates are prepared at the subsector level.

3. The trend extrapolation is based on the relationship between the annual State estimates and the annual NIPA estimates.

4. The Current Employment Statistics (CES) is a monthly survey conducted by the state employment security agencies; the CES program is coordinated by BLS, and the data are published in *Employment and Earnings*.

5. *County Business Patterns* is published annually by the Census Bureau. This series was not used for the annual state estimates of proprietors' income released in May, 2000, because equally current data were available from the IRS.

6. The use of the estimates of wages and salaries in the estimation of quarterly and annual other labor income and personal contributions for social insurance by employees incorporates the state relative changes and distributions of the source data used for wages and salaries into the estimates for the other components, for which more direct source data are unavailable.

7. For the quarterly estimates of proprietors' income in the construction industry, the quarterly relative changes in the estimates of wages and salaries are used instead of the annual trends in proprietors' income because the annual trend does not capture well the rapid and irregular fluctuations in the activity of this industry.

8. The residence adjustment is not a component of personal income.
